

VS Mart

Admin Console Complete Reference Guide

Every page under admin.thevsmart.com, in the order it appears in the side menu -- what each screen shows, every field on every form, what counts as valid input, every button and what it does, and exactly how to add a new user.

This guide covers the Admin / Super Admin console only (admin.thevsmart.com). The Store panel (store.thevsmart.com) is documented separately.

Version 2.0 (full reference edition) - July 2026

1. About this guide

This is the complete reference for admin.thevsmart.com -- the Operations Console used by head-office staff to run VS Mart across every store and zone. It goes through the console exactly in the order the left-hand menu lists it, and for every single screen documents: what you see, every field on every form and whether your input will be accepted or rejected, every button and what happens when you click it (including the exact confirmation text you'll see before anything destructive happens), and any workflow (like approving a credit application) as a numbered click-by-click sequence.

This guide is admin-console-only. VS Mart also has a separate, smaller console at store.thevsmart.com that an individual store's own staff use to run just that one store's till, billing and stock -- that console has its own separate guide. Nothing in this document describes the Store panel, the customer-facing phone app, or the Agent app.

TIP How to read the field tables

Every form in this guide is broken into its exact fields, in a table with four columns: the field's label, its input type, whether it's required, and -- critically -- what counts as VALID input versus what's INVALID. A lot of forms in this console have very few guardrails: where the table says a field has no format checking, that is a literal, verified fact from the code, not a simplification -- it means the screen will accept almost anything you type, including mistakes, with no warning. Read those notes carefully; they're the single most useful thing this guide can tell you.

2. Roles: Admin vs Super Admin

Only two roles can sign in to this console at all: Admin and Super Admin. Any other VS Mart account (a customer, a delivery/collection agent, or a store's own manager login) is rejected at the login screen with the message "This account isn't an admin."

Role	Can do
Admin	Everything day-to-day: Orders, Catalog, Inventory, Procurement, POS, Delivery, Collections, Customers, Credit decisions, KYC/Verification, Reviews, Marketing, Loyalty, Support, Reports, Accounting (view), Agents, Employees, Audit Log, and System Settings (view only, cannot save changes).
Super Admin	Everything an Admin can do, PLUS: create/edit Stores and Zones, save changes on System Settings, manage Integrations (payment/SMS/email keys), open the Security Center, create or reset a store's manager login ("Store Admin"), and add/remove Zone coverage for delivery agents.

Two sidebar items -- Integrations and Security -- are only visible in the menu at all when you're signed in as a Super Admin; an Admin account won't see those links. Settings is visible to both roles, but every field on it is greyed out for an Admin, with a small lock icon and the text "Super Admin only" where the Save button would be. None of the other pages in the console currently hide or disable anything based on role -- an Admin sees the exact same Orders, Catalog, Credit, etc. screens as a Super Admin does, with full read/write access.

3. Signing in

Login screen

Field	Type	Req?	Notes
Email	email	Yes	Any text in an email shape passes the browser's own check (nothing stricter on this screen). VALID: you@thevsmart.com. The real check happens after you submit: the server looks up your account and confirms its role is Admin or Super Admin.
Password	password	Yes	No format check on this screen -- just "don't submit if empty". Click the eye icon to reveal what you typed.

Click Sign in. If your account exists but isn't Admin/Super Admin, you'll land back on this screen with: "This account isn't an admin." -- that means your login itself worked, but this specific account has no console access; it is not a wrong-password message.

Forgot password (two steps)

- 1 Click Forgot password? under the password box on the login screen.

- Step 1 -- Email: type your registered email and click Send reset code. For security this always shows the same success state whether or not that email exists in the system -- it never confirms or denies an account.
- Step 2 -- Reset: enter the Reset code emailed to you (the box hints "6-digit code", though nothing on this screen actually blocks a different length -- the real check is on the server), a New password (minimum 8 characters, enforced by the field itself), and Confirm new password. If the two passwords don't match you'll see: "Passwords don't match." before anything is submitted.
- Click Update password. On success you're sent back to the login screen with a banner: "Password updated -- sign in with your new password."

TIP Sessions expire

If you're idle for a while you'll be signed out automatically and returned to login with: "Your session expired. Please sign in again." Nothing you were working on is lost -- every change in this console saves the moment you click Save/Approve/etc, not when you navigate away, so just sign back in and carry on.

4. How to add a new user (read this first)

CAUTION There is no "Add Admin" button anywhere in this console

This surprises almost everyone, so it's worth saying plainly up front: nothing under admin.thevsmart.com lets you create a brand-new network-level Admin or Super Admin login. The Security Center -- the page most people expect this on -- is read-only. The only genuine "create a login" screen in the whole console creates a store-scoped manager login for the separate Store panel, not a console account. Read on for exactly what each screen actually does.

4.1 The one real "add a user" screen: Store → Admin

Go to Network → Stores, find the store in the list, and click the Admin button on its row (a person-with-gear icon, next to the pencil and trash icons -- easy to miss). This opens Store Admin -- <store name>, described in its own subtitle as: "Manager logins that can sign into the Store panel and run only this store." This screen is Super Admin only -- an Admin account sees the list of existing store logins but no create/reset controls at all.

Fields on "Onboard / re-credential admin"

Field	Type	Req?	Validation - what's VALID vs INVALID
Full name	text	No	Any text; sent to the server as the display name.
Mobile (optional)	text	No	If you fill this in, it must match <code>^+?\d{10,15}\$</code> after spaces are stripped. VALID: 9876543210 (auto-prefixed to +919876543210). INVALID: 98-76-543-210 or 12345 → error "Enter a valid mobile number." If a number already belongs to a different account: "This mobile number already belongs to another account." Leave it blank and the system quietly generates an internal placeholder number just so the record has one -- it's hidden from the admin list so you won't mistake it for a real contact number.
Email (login id)	email	Yes	This is the username the manager will log in with. VALID: manager.kakinada@vsmart.example. INVALID: not-an-email → "Enter a valid email address." Blank → "Email is required."
Password (min 8 chars)	password	Yes	You type the actual password here yourself -- nothing is auto-generated or emailed to the manager. VALID: any 8+ character string, e.g. Kakinada@2026 (no complexity rule beyond length -- no required symbol/number/capital). INVALID: abc123 (6 chars) → the Onboard button simply stays disabled until you reach 8 characters.

Click Onboard admin. On success: "Store admin onboarded. They can now sign in to the Store panel." -- you must then tell the manager their email and password yourself (phone/in person); the system does not send it to them.

NOTE Re-using an existing email resets that person's password

If you submit this form again with an email that already has a manager login at this same store, it does not create a duplicate account -- it silently resets that person's password to whatever you just typed, and updates their name/phone. If the email already belongs to a Super Admin/Admin/Agent account, it's blocked: "This email belongs to a {role} account." If it belongs to a manager at a different store, it's blocked: "This person is already staff at another store."

The Current admins list on the left of this same page shows every existing manager login for the store (Name, Email, Title, Phone, Active/Inactive). Next to each one, a Reset button (key icon, Super Admin only) opens an inline field to set a

brand-new password (same 8-character minimum) and a Set button to confirm -- this fires immediately with no extra confirmation step. There is no button anywhere to deactivate an existing store admin -- only creating and password-resetting are supported here.

4.2 Creating a network-level Admin or Super Admin account

There genuinely is no screen for this in admin.thevsmart.com. The closest-looking page is System → Security, but it only contains two read-only things: a reference table of what each role is allowed to do, and a plain list of existing staff accounts (Name, Phone, Role, Active/Disabled) with no edit, toggle, or add control on any row. To get a new Admin or Super Admin account created, you need to go outside this console -- ask whoever manages the VS Mart platform/backend directly.

4.3 Delivery & collection agents

Agents are not created here either, by design. The Finance & People → Agents page is explicit about this in its own empty-state text: "No agents yet -- stores onboard their own riders from the store panel." This console's Agents page only lets you monitor the fleet (duty status, performance, zone coverage) and, on the Zone Coverage tab, assign or unassign an existing agent to a zone -- it cannot create a new agent record.

4.4 The Employees page

Finance & People → Employees is a read-only staff directory -- Name, Phone, Role, Zones, On Duty, Status, Joined -- with filter pills for All / Admins / Agents / Super Admins. There is no add/invite button, no create form, and no mutation of any kind anywhere on this page. Use it to look someone up, not to create them.

TIP Summary: what can and can't be created from this console

The only account-creation workflow that actually exists in admin.thevsmart.com is a store-scoped Store-panel manager login, via Stores → (pick a store) → Admin → Onboard admin. Creating a new network-level Admin, Super Admin, or delivery/collection Agent account is not possible from this console at all.

5. Patterns you'll see on almost every page

Once you know these, every page in the console behaves predictably -- they're reused everywhere rather than reinvented per screen.

Status badges

Coloured pills that show a record's state. The colour meaning is consistent everywhere: green = good/complete/verified/delivered/active, amber/gold = pending/waiting/frozen, red = rejected/cancelled/overdue/suspended, blue = in progress/confirmed, grey = draft or not started.

Confirmation dialogs are inconsistent -- read every button carefully

Some destructive actions (deleting a store, a zone, a category, a banner, a coupon, archiving a product) pop up a proper "Are you sure?" dialog with the exact consequence spelled out in text. A surprising number of other equally consequential actions -- cancelling a supplier invoice, posting a goods receipt, rejecting a return, marking a delivery failed, freezing a customer's credit, suspending a customer, approving/rejecting KYC, changing a support ticket's status -- fire immediately on click, with no confirmation step at all. This guide flags every one of those under "Good to know" for that page -- when in doubt, assume a button with no visible dialog acts the instant you click it.

Money, dates and codes

- All money is shown as Indian Rupees, e.g. ₹12,345 (no decimal places unless a screen specifically shows them).
- Dates use the Indian format, day-month-year (e.g. 22 Jul 2026).
- Order/return/GRN/PO codes are shown in a monospace font to make them easy to read/copy.

"Append-only" ledgers

You'll see this phrase on the Loyalty, Cash Book, Audit Log and Inventory Audit pages. It means the underlying record is never edited or deleted after the fact -- a correction is always a brand-new, clearly dated entry layered on top, never a silent change to history. This is deliberate, the same way a bank statement or an accountant's ledger works.

Search boxes: usually debounced, occasionally not

Most search boxes wait about a third of a second after you stop typing before they actually search ("debounced"), so typing fast won't spam the server. A couple of pages (Support's ticket search is the one confirmed exception) search on every single keystroke instead -- harmless, just occasionally feels less snappy on a slow connection.

6. Overview

OVERVIEW

The first thing you see after signing in

Dashboard

/ (this is the very first screen after login)

What this page is for: A live snapshot of the whole business -- today's sales, credit exposure, and who's out in the field right now.

Columns you'll see in the list: N/A -- this is a dashboard of cards and charts, not a list.

What's on it

- 8 KPI cards: Revenue Today, Orders Today, Outstanding Credit, Overdue Statements (turns red once it's above zero), Active Customers, Agents, Repayments (30d), Avg Order Value.
- Revenue & Orders -- last 30 days chart, and a Sales by Zone bar-list showing which zones are generating the most.
- Top Products chart and a Live Operations panel that refreshes every 15 seconds on its own -- on-duty/online agent counts, active deliveries/collections, and a live list of who's actually on the road right now.

NOTE Good to know

- There's nothing to click here beyond the charts themselves -- it's a pure landing page/status check, not a page with actions.
- The Live Operations panel is the one part of this page that keeps updating while you're looking at it (every 15s) -- everything else is a fixed 30-day snapshot from when the page loaded.

7. Commerce

COMMERCE

Buying, browsing and selling

Orders

/orders

What this page is for: The full list of every order across every store and zone -- find one, check its status, jump to its detail.

Columns you'll see in the list: Order (code + placed time), Customer (name + phone), Store / Zone, Items, Value, Payment (method + status), Status, Agent.

Search & filters

- Search box -- order code, customer name or phone.
- Status dropdown: Draft, Placed, Pending, Confirmed, Packed, Ready For Dispatch, Out For Delivery, Delivered, Cancelled, Rejected, Returned, Partially Returned, Failed Delivery.
- Payment dropdown: COD, UPI, Card, Netbanking, Credit.
- Sort By: Newest (default), Oldest, Highest Value, Lowest Value, Pending First, Cancelled First.

Buttons & actions

- Click any row to open that order's full detail page.
- Header button Returns → jumps to Returns & Refunds.
- Header button Packing & Dispatch → jumps to the dispatch board.

NOTE Good to know

- 8 stat cards sit above the table: Orders Today, Revenue Today, Pending, Out for Delivery, Delivered Today, Cancelled Today, Avg Order Value, and a combined Credit/COD/Online count.
- New orders can't be created from here -- they only originate from the storefront app or POS.

Order detail

/orders/<code>

What this page is for: Everything about one order -- customer, payment, items, delivery, credit (if used) -- plus the controls to move it along or flag a problem.

Buttons & actions

- Advance status... dropdown -- pick a new status (Confirmed / Packed / Ready For Dispatch / Out For Delivery / Delivered / Cancelled / Rejected / Failed Delivery) and it applies the instant you pick it. No confirmation dialog -- and the list isn't filtered to "sensible next steps" from wherever the order currently is, so double-check before you click.
- Exception dropdown -- a set of common problem reasons that also change status: "Item Out of Stock" and "Customer Requested Cancellation" both set status to Cancelled; "Customer Not Reachable", "Delivery Failed" and "Wrong Address" all set Failed Delivery; "Damaged Product" sets Returned. Also fires immediately, no confirmation.
- Invoice button -- downloads the order's invoice as a PDF.
- Customer 360 button (only shown if the order has a linked customer) -- jumps to that customer's full profile.

NOTE Good to know

- Both status-changing dropdowns act the moment you choose a value -- there is no Save button and no "are you sure" step for either one, including Cancel/Reject.
- A Credit Information card only appears if the order was actually paid using VS Mart credit.

Packing & Dispatch

/orders/dispatch

What this page is for: A live, store-floor Kanban board -- move an order through packing and hand it to a delivery agent. Refreshes itself every 20 seconds.

Columns you'll see in the list: Four columns: To Pack, Packed, Ready for Dispatch, Out for Delivery. Each order is a card showing its code, customer and item count/value.

Moving an order through the board

- 1 In To Pack, click Mark Packed on the order's card.
- 2 It moves to Packed; click Ready for Dispatch.
- 3 It moves to Ready for Dispatch; pick a delivery agent from the Assign agent... dropdown on the card (on-duty agents are listed first, marked "on duty"), then click Dispatch (stays greyed out until an agent is picked).
- 4 It moves to Out for Delivery, showing the assigned agent's name; once it's actually delivered, click Delivered.

NOTE Good to know

- None of the four action buttons show a confirmation dialog -- each one is instant.
- Clicking the order code/customer text (not the button) on any card jumps to that order's full detail page instead.

Returns & Refunds

/orders/returns

What this page is for: Review customer return requests and move each one through approval, pickup and refund.

Columns you'll see in the list: Return (code + date), Order (clickable), Customer, Reason, Refund, Status, Actions.

Search & filters

- Status dropdown: All Statuses, Requested, Approved, Picked, Rejected, Refunded.

Processing a return

- 1 Status Requested: click Approve to move it forward, or Reject to end it there.
- 2 Status Approved: click Mark Picked once the item's been collected, or Refund directly to skip the pickup step.
- 3 Status Picked: click Refund.
- 4 Rejected and Refunded are final -- no further buttons appear.

NOTE Good to know

- Reject and Refund both fire the instant you click them -- there is no confirmation dialog on either, even though Reject is styled in red and Refund moves real money. The refund amount used is whatever the customer originally requested; there's no field here to adjust it.

Product Master (Catalog)

/catalog

What this page is for: The master, company-wide product list -- edit an existing product's name, price, tax and images. New products and per-store stock are handled elsewhere, not here.

Columns you'll see in the list: Product, SKU, Category, HSN, GST, Stores (how many carry it), MRP, Price, Status (Active/Archived).

Search & filters

- Single search box -- product name/SKU/brand. No status or category filter.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Name	text	Yes	Save stays disabled while this is blank -- otherwise any text is accepted.
Brand / Unit / SKU / HSN	text	No	No format checking on any of these -- typos will save silently.
GST rate	number	No	The single easiest mistake to make in this whole console. The label says "0-1" meaning a fraction of 1, not a percentage -- but nothing stops you typing the wrong thing. VALID: 0.05 (= 5% GST). Silently WRONG but accepted with no error: 5 -- saves as 500% GST with zero warning.
Category	dropdown	Yes	Save stays disabled until one is picked; list only loads once the dialog is open.
MRP / Selling price / Credit price	number (₹)	No	No minimum -- a negative or zero price is accepted with no error message.
Product image	file upload	No	PNG/JPG/WebP only; uploads immediately on picking a file, before you click Save.
Description + Telugu/Hindi translations	text	No	Optional -- blank falls back to showing the English text to that customer.

Buttons & actions

- Pencil icon → opens Edit Product.
- Archive icon (only shown while the product is Active) → confirmation dialog "Archive <name>?" / "The product is hidden from catalogs but its history is preserved." Confirm button: Archive.

NOTE Good to know

- There is no "Add Product" button on this page at all -- new products are created from an individual store's own panel, not from head office.
- Archiving is one-way from this screen -- once a product is Archived there is no "Unarchive" button visible to bring it back here.

Categories

/catalog/categories

What this page is for: The two-level category tree (top-level categories and their sub-categories) that organises how customers browse.

Columns you'll see in the list: Name, Slug, Products (count), Status (a live on/off switch), Actions.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Name	text	Yes	Save disabled while blank.
Slug	text	No	Auto-fills from Name as you type (lower-cased, spaces/symbols turned into hyphens) -- until you edit Slug yourself, after which auto-fill stops for that session. When editing an existing category, auto-fill is already switched off by default, so changing Name will NOT update Slug -- a common surprise. No format is enforced once you've hand-edited it: typing spaces or capitals is accepted silently.
Parent	dropdown	No	"-- None (top-level) --" or any top-level category; a category can't be set as its own parent (it's simply excluded from the list, not blocked with an error).
Sort order	number	No	Non-numeric text silently becomes invalid data with no on-screen warning.
Active	toggle	-	Defaults ON for a new category.

Buttons & actions

- New Category button, or the + icon on a top-level row to add a sub-category under it.
- Pencil → edit; Trash → delete, with a confirmation dialog whose wording changes by level -- top-level: "Top-level categories delete their sub-categories too. Products in this category may be affected."; sub-category: "This sub-category will be removed." Both use a red Delete confirm button and are genuinely permanent (unlike the product page's Archive, this is a hard delete).
- The Status switch in the table toggles Active/Inactive instantly with no dialog -- fully reversible either direction, any time.

COMMERCE - Inventory

A 7-tab command centre for stock, reachable from the sidebar's Inventory link; every sub-page shares the same pill sub-menu at the top: Command Center, Reorder, Expiry & Aging, Finance, Audit, Transfers, Operations.

Inventory - Command Center

/inventory

What this page is for: The big-picture view -- stock health per store, and which products are selling fast, selling slow, or dead.

Columns you'll see in the list: Store Health table: Store, Inventory Value, SKUs, OOS, Low, Fill Rate, Health, Sales Today. Fast/Slow Movers & Dead Stock tabs: Product, Units Sold, Revenue, On Hand, Value, Last Sale / Days Idle.

Buttons & actions

- Click any Store Health row → that store's Inventory Workspace.
- Click any product row in Fast/Slow Movers/Dead Stock → that product's Product Intelligence page.

NOTE Good to know

- Purely a dashboard -- nothing here edits stock; it's all navigation to somewhere else.
- "Dead Stock" is a fixed rule (90+ days with no sale) and "Fast/Slow Movers" always look at a fixed last-30-days window -- neither time window is adjustable from this screen.

Inventory - Operations

/inventory/operations

What this page is for: The raw working screen for stock: browse every product's count, adjust it by hand, see warehouse-level levels, the full movement ledger, and current valuation.

Columns you'll see in the list: 4 tabs: Products (Product, Brand, Category, Price, Stock, Status), Stock Levels (Product, Warehouse, On Hand, Reserved, Available, Status), Ledger (Time, Product, Warehouse, Type, Qty, Balance, Note), Valuation (Product, Warehouse, Qty, Unit Cost, Value).

Search & filters

- Products tab: search box, and an "Low stock only" toggle switch.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Mode	dropdown	-	"Adjust by (+/-)" or "Set absolute" -- changes what the next field means.
Change / New count	number	Yes	Apply stays disabled while empty. VALID: -5 in "Adjust by" mode to remove 5 units, or 50 in "Set absolute" mode to force the count to exactly 50. Typing non-numeric text is not blocked by the field itself and would send invalid data with no client-side error.
Reason	text	No	Free text, e.g. "damage" or "correction".

Buttons & actions

- Adjust button per product row (Products tab) opens the dialog above; click Apply to confirm -- no separate confirmation dialog.

NOTE Good to know

- The Products tab only ever shows its first page of results -- there is a known pagination gap where the Prev/Next controls never render, so on a large catalog you may not be able to reach every product from this tab (use the search box to find a specific one instead).
- Ledger and Valuation pull from different endpoints than Products/Stock, so right after an adjustment they may briefly look out of sync until you revisit that tab.

Inventory - Reorder Center

/inventory/reorder

What this page is for: Which products are running low, and how much to reorder, based on recent sales speed.

Columns you'll see in the list: Product, Store/WH, Available, Avg/day, Days Left (red ≤ 3 days, amber ≤ 7), Safety, Suggested Order.

Buttons & actions

- Click any row → that product's Product Intelligence page. This page cannot place an order itself -- it's purely informational.

NOTE Good to know

- The banner spells out the formula: Suggested order = avg daily sales × lead time + safety stock - available, and is explicit that lead time is an assumed 5 days since real supplier lead times aren't tracked yet -- treat the Suggested Order number as a rough guide, not gospel.

Inventory - Stock Transfers

/inventory/transfers

What this page is for: Move stock from a store with surplus to a store that's short, and see transfer history.

Columns you'll see in the list: Suggested tab: Product, Move (from → to), Qty, Why. History tab: Move, Qty, Status, Note.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Product	search-and-pick	Yes	Search only starts once you've typed 2+ characters.

Field	Type	Req?	Validation - what's VALID vs INVALID
From / To	dropdown	Yes	Must be two different warehouses -- the "To" list automatically excludes whatever you picked as "From".
Quantity	number	Yes	VALID: any whole number greater than 0. INVALID: 0 or a negative number -- the Transfer button simply stays disabled, with no text explaining why.
Note	text	No	Auto-fills to "Rebalance" when opened from a suggestion row.

Buttons & actions

- New transfer button, or Transfer on a Suggested row (pre-fills the form).
- On the History tab, a pending transfer shows a Complete button -- fires instantly, no confirmation dialog -- which actually moves the stock.

NOTE Good to know

- A transfer posts two real ledger movements (stock out of one warehouse, into the other) -- it is a genuine stock movement, not an edit, so undoing a mistake means creating a second transfer in the opposite direction.

Inventory - Expiry & Aging

/inventory/expiry

What this page is for: How old your stock is, and which specific batches are close to expiring.

Columns you'll see in the list: Aging buckets (value + unit count per age band). Near-Expiry table: Product, Batch, Qty, Value, Expiry, Days Left (red ≤7, amber ≤15).

NOTE Good to know

- Purely informational -- there's no button here to mark stock down, discard it, or transfer it; you'd act on this information via Operations (Adjust) or Transfers instead.

Inventory - Finance

/inventory/finance

What this page is for: What all the inventory is worth, and what it costs to hold.

Columns you'll see in the list: 8 stat cards: Inventory Value, Expected Revenue, Margin Potential, Dead Stock Value, Turnover, GMROI, Holding Cost (30d), Shrinkage; plus a P&L inputs card.

NOTE Good to know

- Holding Cost uses an assumed 24% annual carrying rate, explicitly flagged in an on-screen note as "not configured in the backend yet" -- treat it as an estimate. Always a fixed 30-day window; not adjustable here.

Inventory - Audit

/inventory/audit

What this page is for: An append-only history of every stock change, plus the tool for recording a physical count.

Columns you'll see in the list: Time, Product, From, To (New Count) with the +/- change, Reason, By.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Product / Warehouse	dropdown	Yes	Record button stays disabled until both are chosen; lists only load once the dialog is open.

Field	Type	Req?	Validation - what's VALID vs INVALID
Counted quantity	number	Yes	The literal number you physically counted on the shelf -- Record button disabled while blank.
Reason	text	No	e.g. "Cycle count".

Buttons & actions

- Physical Count button (top-right) opens the form above; click Record count to save. Confirmation is the toast itself, which shows the exact variance, e.g. "Recorded. Variance +3 (system 47 → counted 50)."

NOTE Good to know

- This log cannot be edited or deleted -- corrections mean recording a new physical count, never changing an old row.

Inventory - Store Workspace

/inventory/store/<id>

What this page is for: One store's own inventory control panel -- what it carries, its own prices, its suppliers, purchases and ledger. Reached by clicking a store on the Command Center.

Columns you'll see in the list: Products tab: Product, Available, Reorder At, Store Price (shows "(global)" when there's no store-specific override), MRP, Carried.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Carried by this store	toggle	-	On = this store stocks/sells it.
Store selling price	number (₹)	No	Leave blank to fall back to the global catalog price (shown as the field's placeholder). No minimum enforced -- a negative price is accepted silently.
Reorder at	number	No	Store-specific reorder threshold; also has no minimum enforced.

Buttons & actions

- Suppliers sub-tab: New Supplier button -- Name required, GSTIN/Phone/Email all free text with zero format checking, save disabled only if Name is blank. No edit/deactivate control for a supplier once added.

Inventory - Product Intelligence

/inventory/product/<id>

What this page is for: A deep, read-only report on one product -- stock by location, sales velocity, margin, supplier history and movement timeline.

NOTE Good to know

- Nothing on this page is editable -- go to Operations (Adjust) or the Store Workspace (per-store price) to actually change anything.

Procurement

/procurement

What this page is for: Four tabs covering suppliers, purchase orders, goods receipts, and money owed to suppliers -- each with a very different level of functionality, worth knowing up front.

Tab: Suppliers -- create-only, no edit

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Name	text	Yes	Save disabled while blank.
GSTIN	text	No	No format check -- e.g. 12345 is accepted with no warning even though it's not a real GSTIN shape.
Phone / Email	text	No	Also unvalidated -- Email is a plain text box, not even checked for an @ sign.

NOTE Good to know

- Once created, a supplier can't be edited or deactivated from this screen -- creation is the only operation available here.

Tab: Purchase Orders -- fully read-only**NOTE Good to know**

- No New PO button, no edit, no receive action -- click a row only to see a read-only breakdown of items and quantities received so far.

Tab: Goods Receipts (GRN)**Buttons & actions**

- Items button -- read-only breakdown.
- Post button (only on draft GRNs) -- commits the stock into inventory. Fires immediately, no confirmation dialog, and once posted the button disappears -- this is the one truly stock-affecting action on the whole page.

Tab: Payables -- the only fully-featured tab**Form fields**

Field	Type	Req?	Validation - what's VALID vs INVALID
Supplier	dropdown	Yes	Save draft disabled until chosen.
Invoice number	text	Yes	Save draft disabled while blank.
Invoice date / Due date	date	No	Nothing checks that Due date is after Invoice date -- a due date before the invoice date is accepted silently.
Subtotal / Tax / Total	number (₹)	Yes (Total)	Save draft stays disabled until Total is a positive number. VALID: 4500. INVALID: 0 or blank.

Recording and paying a supplier invoice

- Click Record Invoice, fill the fields above, click Save draft -- every new invoice starts life as a Draft, regardless of what you filled in.
- Open the invoice and click Approve to move it into Outstanding payables (or Cancel invoice to kill it -- also fires instantly, no confirmation).
- Once outstanding, a payment mini-form appears: Amount (pre-filled with the full balance owed; Record Payment stays disabled if you type more than what's owed), Method (Bank/UPI/Cash/Cheque), Reference. Click Record payment.
- Once payments bring the balance to zero, the invoice is effectively Paid -- there's no separate "mark as paid" button, it's just a side effect of the balance reaching zero.

NOTE Good to know

- The four tabs are inconsistent on purpose: Suppliers = create only, Purchase Orders = view only, GRN = one irreversible Post action, Payables = full create/approve/cancel/pay. Don't expect the same capabilities on every tab.

POS oversight

/pos

What this page is for: A read-only, head-office view of every walk-in till transaction rung up in any store.

Columns you'll see in the list: Receipt, Store/Register, Type (Sale/Voided), Subtotal, Tax, Total, Credit used, Payment, Time.

Search & filters

- Store dropdown and a Zone dropdown.

NOTE Good to know

- The Zone filter is visibly present but doesn't actually do anything -- only the Store filter is wired up to the results, so picking a zone has no effect (a known quirk, not something you're doing wrong).
- There is no way to void, refund, or reprint a receipt from this admin screen -- it's oversight only; those actions happen at the till itself.

8. Fulfilment

FULFILMENT

Getting orders (and cash) to and from the customer

Delivery

/delivery

What this page is for: Every delivery in progress or recently finished, which agents are busy, and the tools to reassign or manually progress a delivery.

Columns you'll see in the list: Order, Customer, Store/Zone, Agent, Distance, Status.

Search & filters

- Status dropdown: Active (default), Pending, Started, Delivered, Failed.

Buttons & actions

- "..." menu per row: Mark Out for Delivery, Mark Delivered, Mark Failed (styled red), Reassign Agent... (opens a dialog to pick a different agent). None of these show a confirmation dialog -- each fires the instant you click it.
- A separate "Failed deliveries -- reattempt queue" card (only appears when there are any) offers, per failed delivery: Retry today, Tomorrow, Manual verify (bypasses the customer's delivery-OTP check entirely), and Return to store -- again, all instant, no confirmation.
- Live Map button (top-right) → the Command Center below.

NOTE Good to know

- "Manual verify" is a genuinely powerful override (skips OTP confirmation the customer would normally give) with the same one-click-no-confirmation pattern as everything else on this page -- use carefully.

Delivery - Command Center

/delivery/command-center

What this page is for: A live map of every rider currently on the road, updating in real time.

NOTE Good to know

- Purely a live viewer -- no status changes happen here; do that from the Delivery page instead. Order codes are clickable through to the order detail page.
- If the live connection drops, the header shows "Reconnecting..." but the page keeps working off the last poll (updates roughly every 15s either way).

Collections

/collections

What this page is for: Manage recovery of overdue customer credit -- who owes, who's assigned to chase it, and bulk recovery tools.

Columns you'll see in the list: (star/priority), Customer, Store/Zone, Amount, Status, Agent (an inline dropdown, unless already Collected), Requested.

Search & filters

- Pills: Open (default), Collected, All.
- Store/Zone dropdowns.

Buttons & actions

- Star icon per row toggles Priority instantly.
- The Agent dropdown per row assigns a collector the instant you pick one -- and disappears (becomes plain text) once that collection is marked Collected.
- Auto-assign unassigned -- bulk-routes every unassigned case to an available agent automatically.
- Run dunning sweep -- escalates aged/overdue accounts.

NOTE Good to know

- Both bulk buttons run instantly on the entire filtered set with no confirmation and no preview of what they're about to change.

9. Customers & Credit

CUSTOMERS & CREDIT

Who VS Mart's customers are, and what they owe

Customers

/customers

What this page is for: The full customer directory, with heavy filtering, export, and bulk actions.

Columns you'll see in the list: Customer (name + VS ID), Phone, VS Score, Outstanding, Risk, KYC, Credit, Status.

Search & filters

- Search (name/phone/VS ID/village).
- Zone, Store, Risk (Low/Medium/High/Critical), KYC (Not Started/Pending/Verified/Rejected), Credit (Has/No Credit), Status (Active/Suspended), Credit Status (Active/Frozen/Closed) dropdowns.
- Sort By: Newest, Oldest, Highest Outstanding, Highest/Lowest VS Score, Most Orders, Highest Revenue, High/Low Risk First, Recently Active, Inactive.

Buttons & actions

- Click a row → that customer's full profile.
- Export → CSV or Excel.
- Tick rows (or select-all) to reveal Bulk Actions: Freeze Credit, Unfreeze Credit, Assign Collection, Send Notification (a Title + Message dialog).

NOTE Good to know

- All three bulk credit/collection actions run instantly on every ticked row with no confirmation dialog -- a large selection can be frozen by one misclick.

Customer 360 (detail)

/customers/<id>

What this page is for: One customer's complete profile across 9 tabs, plus the controls to freeze credit, suspend the account, change their credit limit, or open a support ticket on their behalf.

Columns you'll see in the list: 9 tabs: Overview, Credit, Orders, Collections, KYC, Network (family/household/referrals), Support, Timeline, Notes (admin/collection/delivery/verification note threads).

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
New credit limit	number (₹)	-	Opened via Adjust Limit. Minimum 0 is enforced; there is no maximum anywhere in this form -- a typo with an extra zero could grant a far bigger limit than intended, with no warning.
Subject	text	-	Opened via Create Ticket. Optional -- leaving it blank still creates a ticket, titled "Opened by admin" by default.

Buttons & actions

- Adjust Limit, Freeze Credit/Unfreeze, Suspend/Reactivate, Assign Collection (auto-picks a collector -- no manual choice here, unlike the Collections page), Create Ticket.

NOTE Good to know

- Every one of those buttons fires immediately with zero confirmation dialog -- Freeze, Suspend and Assign Collection in particular are one misclick away from happening.
- The KYC tab here is display-only -- approving/rejecting identity verification must be done on the separate Verification page, not from here.
- CIBIL score can be re-pulled from the Credit tab's Refresh button, but only reuses the customer's own existing consent -- it can't be run for a customer who's never pulled a score themselves in the app.

Credit

/credit

What this page is for: Review credit applications (approve with a specific limit, or reject with a reason) and browse existing credit accounts.

NOTE KYC approval does not grant credit

The page itself carries this banner: approving a customer's identity (KYC) only verifies who they are -- a credit line only opens when an application is separately approved with an explicit limit here. Don't assume approving KYC opens credit automatically; it doesn't.

Columns you'll see in the list: Applications tab: Customer, Requested, Monthly income, CIBIL, KYC, Status. Accounts tab: reuses the full Customers directory.

Search & filters

- Search by name/phone.
- Status: Awaiting decision (default), Approved, Rejected, Withdrawn, All.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Approved limit	number (₹)	Yes	Label literally reads: "this is what the customer can actually spend." Pre-filled with what the customer asked for -- you can type a different number. VALID: any whole number 1 or above. INVALID: 0 or blank -- the Approve button stays disabled. There is no maximum -- a fat-fingered extra zero grants a much bigger line with no safeguard, and approving does not require KYC to actually be Verified (the KYC warning is advisory only, it never blocks the button).
Internal note (approve)	text	No	Up to 300 characters, never shown to the customer.
Reason (reject)	text	Yes	Shown TO the customer. The Confirm rejection button stays disabled until you type something here -- up to 300 characters.

Approving an application

- Applications tab (defaults to Awaiting decision) → find the applicant, click Review.

- 2 Read the KYC status, declared income/occupation/house info, and CIBIL score shown.
- 3 Adjust the pre-filled Approved limit (₹) if needed.
- 4 Optionally add an Internal note.
- 5 Click Approve ₹<amount> (the button label shows the exact figure you're about to grant).

Rejecting an application

- 1 Steps 1-2 above.
- 2 Click Reject (bottom-left, red text) to switch into reject mode.
- 3 Type a Reason -- mandatory, this is what the customer will see.
- 4 Click Confirm rejection.

NOTE Good to know

- Once a decision is made it can't be reversed from this dialog -- to undo a wrong call, go to that customer's own page (Freeze Credit / Adjust Limit) instead. The "Accounts" tab is just the generic Customers directory, not a credit-specific view with limit/utilization columns.

Verification (KYC)

/verification

What this page is for: Review each customer's identity documents and approve or reject their KYC -- this verifies identity only, it does not by itself grant credit.

Columns you'll see in the list: Applicant, Store/Zone, Status, Steps (per-step badges), Docs (count), Submitted.

Search & filters

- Pills: Pending (default), Verified, Rejected, All.
- Store/Zone dropdowns.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Note (for rejection)	text	No	Unlike the Credit and Reviews rejection flows, this one has no required-field guard -- you can click Reject with the note completely empty and it will still go through, leaving no reason on record.

Deciding a KYC submission

- 1 Click Review on the applicant's row.
- 2 Check the submitted documents, per-step badges, and (if a field agent visited) their on-site recommendation, note and photos -- labelled explicitly as "Advisory -- you make the final decision below," i.e. it never auto-applies.
- 3 Click Approve, or type a note and click Reject.

NOTE Good to know

- Both buttons fire immediately (spinner while saving), no confirmation dialog on either.

Reviews

/reviews

What this page is for: Moderate product reviews. Reviews from verified buyers publish automatically and never reach this queue -- this page is only for everything else.

Columns you'll see in the list: Product, Rating, Review (title + body), Author (+ Verified buyer badge), Status.

Search & filters

- Search box.

- Status: Awaiting moderation (default), Approved, Rejected, All.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Reason for removal	text	Yes (to reject)	Up to 300 characters, internal only. Confirm removal stays disabled until you type something.

Moderating a pending review

- 1 Click Review on the row.
- 2 Click Approve (publishes immediately, no reason needed), or click Reject → type a mandatory reason → click Confirm removal.
- 3 An already-Approved review can later be pulled down via Take down (same reason requirement). An already-Rejected review can be brought back via Restore -- restoring needs no reason and is one click.

10. Network

NETWORK

The physical footprint of the business -- Super Admin only for anything beyond viewing

NOTE Everything in this section is view-only for Admin accounts

Creating, editing or deleting a store or zone -- and everything on the Store Admin screen -- is restricted to Super Admin. An Admin account sees the same tables with no action icons, no "New Store"/"New Zone" buttons, and rows that aren't clickable.

Stores

/stores

What this page is for: Every physical VS Mart store -- location, contact info, status.

Columns you'll see in the list: Store, Code, Phone, Status, Address.

Buttons & actions

- New Store button → the New Store form.
- Per row: Admin button → that store's manager-login screen (see Chapter 4 for the full "add a user" walkthrough); pencil → edit; trash → delete.
- Delete confirmation: "Delete <name>? This cannot be undone." Confirm button: Delete.

New / Edit Store

/stores/new and /stores/<id>/edit

What this page is for: Register a new store or edit an existing one -- contact details, exact map location, operating hours, and which zone it serves.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Name / Code	text	Yes	Create/Save button stays disabled until both are filled. Code must be unique -- a duplicate only surfaces as a generic server error, there's no live "already taken" check as you type.
Phone	text	No	No format check at all here -- unlike the Store Admin phone field, almost anything up to 15 characters is accepted.
GSTIN	text	No	Just a placeholder example (29ABCDE1234F1Z5) -- no real validation, any string up to 20 characters is accepted.

Field	Type	Req?	Validation - what's VALID vs INVALID
Address	text	No	Auto-fills once you place the map pin (only if you haven't already typed something).
Serving zone	dropdown	No	"Unassigned" or any zone; a zone already linked to a different store is still selectable (marked "already assigned") -- picking it silently steals that zone away from its current store, with no warning dialog.
Status	dropdown	-	Active / Inactive, defaults Active.
Opens at / Closes at	time	No	An overnight window (e.g. Closes 06:00 after Opens 22:00) is valid and expected, not an error.
Daily order capacity	number	No	Blank = unlimited.
Latitude / Longitude	number	No	Normally set by clicking the map, not typed by hand -- see below.

Setting the store's exact location on the map

- 1 Use the search box above the map to jump to the right area.
- 2 Click anywhere on the map to drop the store's pin, or drag an existing pin to fine-tune it.
- 3 A hint below the map confirms which zone (if any) the pin falls inside -- e.g. "Inside zone: Kakinada East", or a warning "Outside all service zones" if it doesn't land inside any drawn zone.

NOTE Good to know

- No confirmation before Create/Save -- both fire the moment you click the button.

Store Admin (add / reset a store manager login)

/stores/<id>/admin

What this page is for: See Chapter 4.1 for the complete field-by-field walkthrough of this screen -- it's the one genuine "create a user" flow in the whole console.

NOTE Good to know

- Quick recap: Super Admin only. Creates an email+password login scoped to this one store's Store panel -- not a network-level Admin/Super Admin/Agent account. Re-using an email that's already a manager here resets their password rather than creating a duplicate.

Zones

/zones

What this page is for: Every delivery/serviceability area, which store fulfils it, and a running log of customer requests from areas VS Mart doesn't cover yet.

Columns you'll see in the list: Zone, Code, Store, Active, Credit (whether pay-on-credit works there), Delivery Fee.

Buttons & actions

- New Zone button.
- Per row: pencil → edit; trash → delete.
- Delete confirmation: "Delete <name>? Customers in this zone will lose serviceability." Confirm button: Delete.

NOTE Good to know

- A second card, "Expansion Requests", lists people who asked to be served from a currently not-serviceable address -- read-only, no action buttons; if it ever fails to load it just shows empty with no visible error.

New / Edit Zone

/zones/new and /zones/<id>/edit

What this page is for: Define a delivery area's boundary on a map, assign it to a store, and set its delivery pricing rules.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Name / Code	text	Yes	Create/Save stays disabled until both are filled.
Assigned store	dropdown	No	This is the mirror of the Store form's "Serving zone" field -- editing either side can silently reassign the link; whichever you save last wins, with no cross-warning between the two screens.
Delivery fee / Free delivery threshold / Min order (₹)	number	No	No minimum enforced anywhere -- a negative delivery fee is accepted with no error.
ETA (min)	number	No	Pre-filled to 20.
Priority	number	No	Pre-filled to 10. Used only when a customer's address falls inside more than one overlapping zone -- the higher-priority zone wins. Nothing on screen explains this beyond the label itself.
Active / Credit enabled	toggle	-	Both default ON.

Drawing the zone's boundary on the map

- 1 Click Draw service area -- the cursor becomes a crosshair and the map stops panning (this is deliberate, so clicks reliably drop points).
- 2 Click once per corner of the area you want to cover -- each click drops one boundary point. A counter on the Finish button tracks how many you've placed.
- 3 Made a mistake? Click Undo point to remove just the last one.
- 4 Once you have 3 or more points, Finish (N) becomes clickable -- click it to close the shape (you cannot save with fewer than 3 points).
- 5 Drag any dot on the finished shape to fine-tune the boundary.
- 6 To scrap it and start over, click Clear & redraw.

NOTE Good to know

- There's no separate "Save polygon" step -- the shape you draw is bundled in automatically when you click the page-level Create/Save button. If you never draw anything, the zone still saves, just with no usable boundary.

11. Growth & Support

GROWTH & SUPPORT

Marketing, loyalty and customer care

Marketing

/marketing

What this page is for: Three tabs: Banners & Deals, Coupons, and Campaigns (one-off push notifications).

Tab: Banners & Deals

Columns you'll see in the list: Thumbnail, Title, Type, Zone/Store, State, Priority, Impr/Clk/CTR.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Banner image	file upload	Yes (to publish)	PNG/JPG/WebP only. Each placement has its own minimum resolution (e.g. 1200x750 for a 16:10 slot) -- upload below that minimum shows an amber warning banner and disables "Use this crop" until you pick a larger file.
Type	dropdown	-	Banner / Deal / Coupon.
Placement	dropdown	-	Home Top, Home Middle, Home Spotlight, Product List, Product Detail, Cart.
Title (English/Telugu/Hindi)	text	Yes (English)	Save button disabled only while the English Title is empty; translations are optional.
CTA button text	text	No	Max 40 characters; leave blank for no button at all.
Text style / Text position	dropdown	-	Light-on-dark, dark-on-light, or no overlay; position disables itself automatically when style is "No overlay".
Accent colour	colour picker	No	Blank falls back to brand green.
Tap action	dropdown	No	None / Home / Category / Product / Brand / Search / VS Credit / Offers / Cart / Profile / Order / Store / External Link -- most options reveal one extra field (e.g. Product ID, or a URL for External Link).
Zone / Store target	dropdown	No	Global by default, or narrow to one zone/store.
Start / End (IST)	datetime	No	No check that End is after Start.
Discount % / Deal price	number	No	No minimum or maximum enforced -- an unreasonable value is accepted with no warning.
Pin to top / Is marketing fallback / Publish immediately	toggle	-	"Publish immediately" only appears when creating a brand-new banner, not when editing an existing one.

The banner approval workflow

- 1 Open a banner in Edit mode -- a "Workflow:" strip shows only the buttons valid for its current state.
- 2 Draft → Submit or Archive.
- 3 Pending → Approve, Reject (a browser prompt asks for a reason), or Archive.
- 4 Scheduled/Active → Pause or Archive.
- 5 Paused → Resume or Archive.
- 6 Expired → Approve (to relaunch) or Archive.

Buttons & actions

- Delete: if the banner has ever actually been shown to a customer, it's archived instead of erased (its stats are kept); if it's never been shown, it's permanently deleted. Either way the confirm button reads Delete banner.

Tab: Coupons

Columns you'll see in the list: Code, Type, Value, Min Order, Used, Active.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Code	text	Yes	Auto-uppercases as you type -- no length or character-set restriction beyond that.
Discount type	dropdown	-	Percent or Flat.
Value	number	No	No bound at all -- a "150%" percent discount is accepted with no warning.
Min order / Max discount (₹)	number	No	No format check.
Usage limit / Per-user limit	number	No	No format check.
Valid to	date	No	-

Field	Type	Req?	Validation - what's VALID vs INVALID
Active	toggle	-	Turning this off stops the code validating at checkout immediately.

Buttons & actions

- No delete icon in the row itself -- open Edit first, then use Delete in the dialog's footer. Confirmation: "Delete <code>? Past redemptions are kept for accounting, but the code stops working immediately. Deactivate instead if you may re-run this promotion." Confirm button: Delete coupon.

Tab: Campaigns (push notifications)

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Title / Message	text	Yes (Title)	Send button disabled while Title is empty.
Image	file upload	No	Optional; defaults to the app logo.
Segment	dropdown	-	All customers / Credit customers / Zone customers -- picking Zone reveals a required Zone dropdown.

NOTE Good to know

- Send campaign fires immediately with no confirmation and no preview of how the push will actually look on a phone -- potentially reaching every customer with one click.

Loyalty

/loyalty

What this page is for: Points earned, redeemed and still outstanding. Append-only -- corrections are new adjustment entries, never edits to history.

Columns you'll see in the list: Points ledger: Customer, Movement (earn/redeem/adjust/expire), Points, Balance after, Note, When. Top members: Customer, Tier, Lifetime earned, Earning events.

Search & filters

- Ledger tab: Movement type dropdown, search box.
- Top members tab: no filters, capped at the top 50.

NOTE Good to know

- There is no manual point-adjustment control anywhere on this page -- despite "adjust" being a real, visible movement type in the ledger, there's no "Add points"/"New adjustment" button to create one from here. If you need to manually award or deduct points, that capability doesn't currently exist in this console.

Redemptions

/redemptions

What this page is for: A read-only log of every coupon/voucher actually spent -- Loyalty tracks what's owed, this tracks what it's actually cost so far.

Columns you'll see in the list: Coupon (+ Personal voucher/Public code badge), Redeemed by, Order, Discount given, When.

Search & filters

- Dropdown: All coupons / Personal vouchers / Public campaign codes.
- Search box.

NOTE Good to know

- Purely a report -- no row actions, no links through to the order or customer. "Outstanding value" on the summary card is only meaningful for flat-value vouchers; a percent code's real cost depends on the basket and isn't reflected there.

Referrals

/referrals

What this page is for: Who invited whom, how many converted, and what the scheme paid out.

Columns you'll see in the list: By referrer: Referrer, Invited, Converted, Pending, Rewards paid. All referrals: Referrer, Invited, Code, Status, Created.

Search & filters

- All referrals tab only: Status dropdown (Completed/Pending/Expired).
- Search box on both tabs.

Buttons & actions

- View invitees per referrer → a drilldown of exactly who they invited and each invite's status/reward.

NOTE Good to know

- Entirely read-only -- no way to manually create or edit a referral. "Rewards paid" on the summary card is already doubled (both the referrer and the new customer get a voucher), easy to misread as a single amount.

Support

/support

What this page is for: The customer support inbox -- filter, open, reply, reprioritize and resolve tickets.

Columns you'll see in the list: Ticket, Subject, Customer, Store/Zone, Priority, Status, Opened.

Search & filters

- Status pills: All, Open, In Progress, Resolved, Closed.
- Search box (this one searches on every keystroke, not debounced like most others).
- Store/Zone dropdowns.

Handling a ticket

- 1 Click anywhere on the row to open it.
- 2 Change Priority (Low/Medium/High) via its dropdown -- saves the instant you pick a value, no separate Save button.
- 3 Type a reply and press Enter or click Send.
- 4 Change Status (Open/In Progress/Resolved/Closed) the same way -- instant, no confirmation.

NOTE Good to know

- Both Priority and Status dropdowns commit immediately -- a stray click could close a ticket by accident.

Legal / CMS

/legal

What this page is for: Edit the public legal and content pages -- privacy policy, terms, about, contact and more -- as raw HTML. Super Admin and Admin can edit; anything else is read-only.

Columns you'll see in the list: A simple sidebar list of pages (Title + /slug), each opening into an editor on the right.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Slug	text	Yes (new page)	Only used when creating a page -- cleaned live to lowercase-with-hyphens as you type. "Create page" stays disabled if the cleaned slug or the Title end up empty. Cannot be changed once a page exists.
Title	text	Yes	-
Body (HTML)	textarea	No	Raw HTML, rendered as-is on the live public page -- no rich-text editor and no preview, so a markup mistake shows immediately to visitors.
Active	toggle	-	Off hides the page from the public site; there's no separate "Draft" state, only Active/Inactive.

NOTE Good to know

- Switching to a different page in the sidebar without saving discards your edits with no warning -- there's no "unsaved changes" prompt.
- New pages are always created as type "legal" -- this screen can't create other content types.

Account Deletions

/account-deletions

What this page is for: Review and process customer requests to delete their account/data.

Columns you'll see in the list: Name, Contact, Reason, Status, Requested, and an inline Status dropdown + Note button.

Search & filters

- Pills: All, Pending, In review, Completed, Rejected.

Processing a request

- Use the Status dropdown in the row to move it through Pending → In review → Completed (or Rejected) -- saves the instant you pick a value.
- Click Note to record internally how the request was actually handled -- this is the only place that detail is captured.

NOTE Good to know

- Marking a request Completed or Rejected has no confirmation step at all, despite being arguably the most consequential status change in the whole console.
- This screen only tracks the review status of the request -- it does not itself perform the deletion; that must actually happen elsewhere and be recorded via the Note.

12. Finance & People

FINANCE & PEOPLE

Money, in every form, and staff

Payments

/payments

What this page is for: Every payment, refund and credit repayment across the business -- searchable and reconcilable for any date range. Read-only.

Columns you'll see in the list: When, Customer, Amount, Purpose, Method, Gateway, Status, Reference.

Search & filters

- Search (customer/phone/order code/gateway payment id).

- Status (Created/Pending/Success/Failed/Refunded), Method (UPI/Card/Netbanking/Cash), Purpose (Order/Repayment/Refund) dropdowns.
- From / To date pickers.

Buttons & actions

- Click a row → a detail dialog with the full gateway reference IDs and a timeline of every status event for that payment. No edit/refund action here -- entirely read-only.

NOTE Good to know

- "Reconciliation" on this page just means: set your filters, and the Collected/Refunded/Failed summary cards recompute live to match -- there's no separate "run reconciliation" button or export from this screen.

Cash Book

/cash

What this page is for: The trail of cash collected in the field, handed over by agents, and counted/verified by finance -- so every rupee is traceable from customer to bank.

Columns you'll see in the list: Deposits tab: Date, Agent, Declared, Counted, Short by, Via, Collections, Status. Cash with agents tab: Agent, Phone, Holding, Collections.

Search & filters

- Page-level From/To date range.
- Deposits tab Status: Awaiting count (default), Verified, Short, Rejected.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Amount actually counted	number (₹)	-	Pre-filled with the amount the agent declared -- if you don't change it, clicking Count In silently records a perfect match. If you type less than declared, a live warning shows the exact shortfall that will be recorded against that agent. There's no way to record counting MORE than was declared.
Note (reject)	text	Yes (to reject)	Up to 300 characters; explains why a deposit is being rejected.

The full cash trail

- 1 An agent collects cash from a customer (recorded elsewhere) -- it shows as their "Holding" balance on the Cash with agents tab until handed over.
- 2 The agent hands it over as a Deposit (declared amount + method) -- appears here with status Awaiting count.
- 3 A finance user opens the deposit, checks/adjusts the Amount actually counted, and clicks Count in -- if it's short, the toast confirms a shortfall was recorded.
- 4 Alternatively, click Reject with a reason -- the collections covered by this deposit go back to showing as "cash still with the agent," not deleted.

NOTE Good to know

- No confirmation dialog on Count In -- a careless click on a pre-filled amount records a perfect match even if you never actually counted the cash.

Reports & Analytics

/reports

What this page is for: A library of standard reports, downloadable as CSV, Excel or PDF.

Columns you'll see in the list: Report tabs: Sales, Orders, Credit, Collections, Inventory, Agents. Columns within each report are defined by that report itself.

Buttons & actions

- CSV / Excel / PDF buttons export whichever report tab is currently open.

NOTE Good to know

- Easy to miss: the export always matches the tab you're currently viewing -- if you click Sales, then switch to Orders, then hit Export, you'll get Orders. There's no date-range control on this page at all; any date scoping is decided by the server, not by you.

Accounting

/accounting

What this page is for: A financial snapshot -- revenue, profit, cash flow, per-store P&L, and what's owed to delivery agents -- plus the formal double-entry ledger underneath.

Columns you'll see in the list: Tabs: Overview, Profit & Loss, Balance Sheet, Trial Balance, Journal. P&L by Store table: Store, Orders, Revenue, Platform Fees, Procurement, Margin. Agent Settlements table: Agent, Deliveries, Collections, Incentives, Payable.

NOTE Good to know

- The Overview tab is fixed to a rolling 30-day window -- there's no control on this page to change the period. Entirely read-only, no row actions anywhere.

Agents

/agents

What this page is for: Fleet-wide monitoring of delivery/collection agents -- duty, performance, zone coverage. Cannot create or edit an individual agent's account.

Columns you'll see in the list: Duty & Attendance: Agent, Store, Vehicle, On duty, Available, Checked in, Rating. Performance: rank, Delivered, Failed, Success%, Avg time, Accepted%, Collected, Recovered, Recovery%. Zone Coverage: two lists, covering / not covering the selected zone.

Search & filters

- Zone Coverage tab: pick a zone from a dropdown.

Buttons & actions

- Zone Coverage tab only: trash icon to remove an agent from covering that zone, or Assign to add one who isn't currently covering it -- both fire instantly, no confirmation.

NOTE Good to know

- By design, there is no "add agent" anywhere on this page -- the empty state says so directly: "stores onboard their own riders from the store panel." The Duty board refreshes itself every 60 seconds.

Employees

/employees

What this page is for: A read-only staff directory across the whole network.

Columns you'll see in the list: Name, Phone, Role, Zones (agents only), On Duty, Status, Joined.

Search & filters

- Pills: All, Admins, Agents, Super Admins. No search box.

NOTE Good to know

- Confirmed: there is no add/invite/create-login control anywhere on this page -- see Chapter 4 for where account creation actually happens (short version: only store-manager logins can be created, from Stores → Admin).

13. System

SYSTEM

Configuration and accountability -- handle with care

Audit Log

/audit

What this page is for: A complete, append-only record of every privileged action taken in the console, for compliance review.

Columns you'll see in the list: Time, Actor, Action (a monospace code like `product.update`), Target, Details.

Search & filters

- Two plain text boxes: "Filter by action..." and "Filter by actor..." -- substring search, not dropdowns. There is no date-range picker on this page, despite that being an obvious thing to expect from an audit log.

Buttons & actions

- Details button per row → a Before/After panel showing the raw data that changed.

Settings

/settings

What this page is for: The core business rules the whole platform runs on. Super Admin only for saving -- an Admin can view every field but every input is greyed out.

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
Currency	text	-	Free text, e.g. INR.
GST rate (0-1)	number	-	The same trap as the Catalog product form: must be a fraction of 1, not a percentage, and nothing stops you typing the wrong thing. VALID: 0.05 (5%). Silently WRONG but accepted: 5 (reads as 500% GST platform-wide, with zero warning on save).
Support phone / Support email	text	-	No format check.
Delivery fee / Free delivery threshold / Min order (₹)	number	-	No minimum -- a negative delivery fee is accepted silently.
Platform fee type	text	-	This is a free-text box, not a dropdown, even though only two values are actually meaningful: percent or flat. A typo like "Percentage" saves without any warning.
Platform fee value / cap	number	-	No bound enforced.
Default credit limit / Late fee (flat / %)	number	-	No bound enforced -- these apply platform-wide to every new credit account.

Buttons & actions

- Save changes (Super Admin only) applies instantly to the whole platform -- no confirmation dialog, no preview of what's changing.

Integrations

/settings/integrations

What this page is for: Where a Super Admin plugs in the real-world services VS Mart depends on -- SMS, email, Razorpay payments, push notifications, Google Maps. Super Admin only -- an Admin account doesn't even see this page's data load, only a lock icon and "You don't have permission."

Form fields

Field	Type	Req?	Validation - what's VALID vs INVALID
SMS provider	dropdown	-	Console (log only) / MSG91 / Off.
MSG91 auth key / OTP bypass code	password	No	Write-only -- see note below.
SMTP host / port / username / password / from address	mixed	No	Password field is write-only like the others.
Razorpay Key id / Key secret / Webhook secret	mixed	No	Secrets are write-only.
FCM server key / Google Maps server key	password	No	Write-only.

NOTE Good to know

- Every secret field is write-only by design -- the console never shows you a previously-saved key back, only a status chip reading "Configured" or "Not set." Its placeholder always reads "Leave blank to keep current" -- so leaving it empty and saving does NOT clear/delete that credential, it just leaves the existing one untouched.
- There is no "Test connection" or "Send test email/SMS" button anywhere on this page, and no way to explicitly clear/remove a credential once set -- only overwrite it with a new value.

Security Center

/security

What this page is for: Super Admin only. Role-based access control and account governance -- but read this carefully, because it is NOT where you add a new admin user (see Chapter 4).

Columns you'll see in the list: Role Permission Matrix -- a fixed reference table (Capability x Super Admin/Admin/Agent/Customer) showing who's allowed to do what, e.g. only Super Admin can "Manage stores & zones," "Create/edit staff," or "System settings & credit rules." Staff Accounts & Roles -- a read-only table: Name, Phone, Role, Status.

NOTE Good to know

- Neither table has any edit, toggle, deactivate, or "add user" control -- this page only displays who's allowed to do what (the matrix) and who currently has an account (the staff list). It does not let you act on either.
- Three cards at the bottom -- Two-Factor Auth, IP Restrictions, Session Management -- are explicitly labelled "Awaiting backend data": VS Mart is OTP/password-only today with no second factor, no IP allow-listing, and no live force-logout roster. These are not broken -- they are honestly marked as not built yet.

14. Quick reference: the fields most likely to trip you up

Most fields in this console have no validation at all beyond "don't submit if blank" -- this table is the short list of fields that behave in a genuinely surprising way, gathered from every page in this guide, in one place.

Field (where)	VALID example	INVALID / risky example
GST rate (Catalog & Settings)	0.05 = 5%	5 (silently becomes 500% GST -- no error, no warning)
Platform fee type (Settings)	percent / flat (free text)	Percentage / PERCENT (typo saves silently)
Store-Admin password	8+ characters, any mix	Under 8 characters (button just stays disabled)
Store-Admin email	a real email shape	not-an-email → "Enter a valid email address."
Store-Admin mobile	10-15 digits, optional +	98-76-543-210 (dashes) → "Enter a valid mobile number."
Credit approved limit	whole number, 1 or more	0 or blank (button disabled); no upper limit exists
Credit rejection reason	any non-empty text	blank (Confirm rejection stays disabled)
KYC rejection note	any text -- but NOT required	blank IS accepted -- can reject with zero reason on record
Coupon code	auto-uppercases as typed	no length/character limit enforced either way
Category slug (new)	auto-generates from Name	editing an existing category does NOT auto-update its slug
Stock transfer quantity	whole number greater than 0	0 or negative (button silently stays disabled)
Banner image	meets the placement's minimum px size	too small → amber warning, "Use this crop" disabled
Cash-deposit counted amount	the amount you actually counted	leaving the pre-filled (declared) amount records a false perfect match
Zone/Store code	must be unique	a duplicate only shows a generic server error, no live check

15. Good habits

- Read every confirmation dialog before clicking the red button -- and remember that a lot of equally serious actions (Reject, Cancel invoice, Post GRN, Mark Failed, Freeze Credit, Suspend, Complete transfer) have no dialog at all. If a button looks destructive but nothing pops up, assume it already happened.
- Never type a GST rate or platform-fee type without double-checking the label's format hint -- these two fields are the easiest way to silently break pricing platform-wide.
- Prefer "deactivate" over "delete" for coupons and content pages when you might reuse them -- several delete confirmations say this explicitly.
- When approving credit, always re-type the limit rather than trusting the pre-fill -- there's no upper bound and no second confirmation if you fat-finger an extra digit.
- Use the Audit Log if a number looks wrong and you need to know who changed what, and when -- it's append-only and can't have been tampered with after the fact.

16. If something looks wrong

What you're seeing	What it means
"This account isn't an admin"	Your login worked but this specific account has no console access -- not a wrong password.
No "Add Admin" button anywhere	Correct -- it doesn't exist. See Chapter 4.
Settings page has no Save button	You're signed in as Admin, not Super Admin -- fields are view-only for you.
Integrations page just says "permission"	Same as above -- Super Admin only, and Admin never even sees the data load.
A button did something with no warning first	Expected for many actions in this app -- see Chapter 5's note on inconsistent confirmations.
The Zone filter on POS does nothing	Known quirk -- only the Store filter is actually wired up on that page.
Inventory > Operations > Products only shows the first page	Known gap -- use the search box to find a specific product instead of paging.
A screen shows a card saying "Awaiting backend data"	That feature (2FA, IP restrictions, session roster) is planned but not built yet -- not a bug.

17. Glossary

Term	Meaning
GMV	Gross Merchandise Value -- total rupee value of everything ordered, before refunds/fees.
KYC	Know Your Customer -- the identity/address verification a customer completes.
SKU	Stock Keeping Unit -- the unique code identifying one specific product/variant.
HSN / GST	HSN is the tax classification code; GST is the tax rate applied to it.
MRP	Maximum Retail Price -- the legal ceiling; the actual selling price can be at or below it.
GRN	Goods Receipt Note -- created when stock ordered from a supplier physically arrives.
WAC	Weighted Average Cost -- the cost basis used for margin and valuation figures.
POD	Proof of Delivery -- the photo a delivery agent captures on handover.
Append-only ledger	A record only ever added to, never edited/deleted -- corrections are new entries.
Zone / Serviceability	A mapped delivery area; an address must fall inside one to be ordered to.
LSP / NBFC	Lending Service Provider / Non-Banking Financial Company -- VS Mart's regulated credit-lending partner model; VS Mart itself doesn't lend on its own books.
Dunning	The escalation process for chasing overdue/aged credit accounts.

18. Getting more help

This guide documents admin.thevsmart.com as it exists at the time of writing. If a screen no longer matches what's described here, the on-screen labels are always the current source of truth. For anything role- or access-specific -- getting a Super Admin account created, or a change that needs sign-off -- speak to whoever administers the VS Mart platform directly, since (per Chapter 4) that step cannot be done from inside this console at all.

A separate guide covers store.thevsmart.com (the Store panel individual stores use to run their own till, billing and stock) -- ask for it if that's what you need next.
