

VS Mart

Admin Panel User Guide

A complete, plain-language walkthrough of the Operations Console —
what it is, who uses it, and how to run the business from it.

Written for store managers, operations staff and business owners — no coding or technical background required.
Covers thevsmart.com admin console · Version 1.0 · July 2026

1. Welcome

The **VS Mart Operations Console** (usually just called “the admin panel”) is the single screen from which VS Mart is run day to day. It is a website — there is nothing to install — reached by signing in at your organisation's admin address (for example **admin.thevsmart.com**) with a web browser on a laptop or desktop computer.

Everything that happens across the business shows up here: every order placed in the app, every rupee of credit extended to a customer, every delivery a rider makes, every rupee of cash an agent collects, every product on sale, every store, every zone the business delivers to, and every support ticket a customer raises. The admin panel is where that information is reviewed, and where staff take action on it — approving a KYC application, creating a discount banner, refunding an order, adjusting a price, or checking whether yesterday's sales were higher than the day before.

TIP Who this guide is for

You do not need to know how to code, and you do not need to understand how the app or the website behind it was built. This guide explains the console the way you would explain a shop's till or a bank's teller software to a new employee: what each screen does, and what to click to get a job done.

What the console is *not*

- It is **not** the customer-facing VS Mart app — that is what shoppers use on their phones to browse and order.
- It is **not** the Store Panel — a separate, smaller console (at store.thevsmart.com) that an individual store's own staff use to run just that one store's counter, billing and stock.
- It is **not** the Agent App — the phone app delivery and collection agents use out in the field.

The admin panel sits above all of these: it is the head-office view across every store, every zone and every customer, all at once.

2. Who can sign in, and what they can do

Access to the console is limited to authorised office staff — it is not something a customer, store cashier or delivery agent can open. There are two levels of access:

Role	Can do
Admin	Day-to-day operations: view and manage orders, customers, catalog, inventory, delivery, collections, credit, marketing, support, reports and more. This covers the large majority of daily work in the console.
Super Admin	Everything an Admin can do, plus the sensitive, business-wide controls: changing System Settings (GST rate, delivery fees, credit rules), managing third-party Integrations (payment gateway keys, SMS/email credentials), and the Security Center (staff access and account governance).

A handful of menu items — **Integrations** and **Security** — are only visible in the side menu at all if you are signed in as a Super Admin. If you don't see them, that's expected; your account is an Admin account and those areas are out of scope for your role.

3. Getting started: signing in

1. Open a web browser (Chrome, Edge, or similar) on a computer and go to your admin web address, e.g. **admin.thevsmart.com**.
2. Enter the **email address** and **password** that head office set up for you, then click **Sign in**.
3. If you've forgotten your password, click **Forgot password?** under the password box and follow the on-screen instructions to reset it by email.

NOTE If you're told "This account isn't an admin"

This means the email you signed in with exists in VS Mart, but doesn't have admin/super-admin access — for example it may be a customer or store account. Ask a Super Admin to grant your account admin access, or double-check you're using the right email.

For security, your sign-in session eventually expires. If that happens you'll be returned to the sign-in screen with a note that your session expired — simply sign in again; nothing you were working on is lost, since the console saves changes as you make them, not when you leave the page.

4. Finding your way around

Once signed in, the console has three consistent parts on every screen:

- **Left sidebar** — the main menu, organised into groups (Overview, Commerce, Fulfilment, Customers & Credit, Network, Growth & Support, Finance & People, and System). Click any item to open that section.
- **Top bar** — shows which section you're in and your account menu (top right) for signing out.
- **Main panel** — the working area in the centre: lists, tables, charts and forms for the section you've selected.

Almost every list screen in the console follows the same pattern, so once you've learned one, you've largely learned them all:

- A **search box** and/or **filters** along the top to narrow down a long list (by date, store, zone, status, etc.).
- A **table** of results — click a row to open its full details.
- Small **action icons** at the right of each row (a pencil to edit, a trash can to delete, and so on) for quick actions without opening the full record.
- Where relevant, an **Export** option to download the list as CSV/Excel/PDF for reporting.

TIP "Append-only" records

You'll see this phrase in a few places (Loyalty, Audit Log, Cash Book). It means the underlying record is never edited or deleted after the fact — corrections are always added as a new, clearly-labelled entry. This is intentional: it keeps a complete, honest history for money and compliance-sensitive data, the same way a bank ledger works.

5. The menu, section by section

This is the heart of the guide: what each item in the left-hand menu does, in the order it appears on screen.

Overview

Dashboard

The first screen you see after signing in

What it's for: A live, at-a-glance summary of the whole business: today's revenue and orders, outstanding customer credit, overdue repayments, total customers and agents, a 30-day sales trend, the best-selling products, sales broken down by delivery zone, and a live view of which delivery agents are currently on duty.

How to use it: Use it as your morning check-in — no clicking required, it's the landing page. The on-duty agent panel refreshes automatically every 15 seconds so it reflects the field in real time.

Commerce

Buying, browsing and selling

Orders

Anyone reviewing or resolving individual customer orders

What it's for: The full list of every order placed across every store and zone — who ordered what, when, from which store, its current status, and its value.

How to use it: Search or filter to find an order (by code, customer, store, status or date), then click it to open the full order detail — items, delivery address, payment, and its status history.

Packing & Dispatch (*under Orders*)

Store operations staff moving orders through fulfilment

What it's for: A live board of orders as they move through the warehouse: **To Pack** → **Packed** → **Ready for Dispatch** → **Out for Delivery**.

How to use it: Watch the columns to see where orders are getting stuck, and move orders forward as each stage is completed.

Returns & Refunds (*under Orders*)

Customer-service and finance staff handling returned items

What it's for: Every return request a customer has raised, so it can be reviewed and either approved for refund or declined.

How to use it: Open a request, check the reason and any photos supplied, then process the refund or reject it with a note.

Catalog (“Product Master”)

Whoever maintains what VS Mart sells company-wide

What it's for: The master list of every product VS Mart sells: its name, SKU, HSN code and GST rate, and MRP. This is the company-wide product definition — actual stock counts are held separately, per store.

How to use it: Search for a product to edit its details, or archive a discontinued product (this hides it from customers but keeps its sales history). New products are usually added from an individual store's own panel, not from here.

Categories (*under Catalog*)

Whoever organises how products are browsed

What it's for: The category tree customers browse by — top-level categories (e.g. “Dairy”) and the sub-categories nested underneath them (e.g. “Milk”, “Curd”).

How to use it: Add a top-level category, or use the + icon next to one to add a sub-category under it. Edit or delete existing ones with the pencil/trash icons.

Inventory

Ops/warehouse staff and management watching stock health

What it's for: A network-wide command centre for stock: overall health, slow-movers and dead stock, ageing batches nearing expiry, stock valuation, and drill-downs into any single store's or product's stock position.

How to use it: Start on the main Inventory page for the big picture, then use the sub-tabs — Operations, Reorder Center, Transfers, Expiry & Aging, Finance, Audit — for specific jobs, such as seeing what to reorder or moving surplus stock from one store to another that's short.

Procurement

Whoever buys stock in from suppliers

What it's for: Suppliers, purchase orders raised against them, and the goods-receipt notes recorded when stock actually arrives.

How to use it: Record a new purchase order against a supplier, and check it off as received (which updates stock automatically) once the goods arrive.

POS

Head-office oversight of in-store, walk-in billing

What it's for: A read-only, company-wide view of every till/register transaction rung up in-store (as opposed to app orders).

How to use it: Use it to review or investigate a specific POS sale; the actual billing itself happens at the store's own counter, not here.

Fulfilment

Getting orders and cash from the store to the customer, and back

Delivery

Whoever oversees the rider fleet

What it's for: The Delivery Control Center: live dispatch, how loaded each agent currently is, and the queue of deliveries waiting to go out. A separate **Command Center** view shows every active rider moving on a live map, refreshed roughly every 15 seconds, with performance stats per zone.

How to use it: Use this to spot a zone that's short on riders, or to check on a specific delivery that a customer has asked about.

Collections

Whoever manages recovery of outstanding customer credit

What it's for: Credit-recovery operations across every store and zone — which customers owe money, which collection agent is assigned, and how urgent each case is.

How to use it: Mark a case as priority using the flag icon when it needs urgent attention; open a case to see its full recovery history.

Customers & Credit

Who VS Mart's customers are, and what they owe

Customers

Anyone who needs to look up or support a specific customer

What it's for: The full directory of every VS Mart customer.

How to use it: Search by name, phone or ID to open a customer's full profile — their orders, credit standing, addresses and activity in one place (this is sometimes referred to internally as the "Customer 360" view).

Credit

Finance/credit staff deciding who gets store credit

What it's for: The queue of customer credit applications waiting for a decision, and the accounts that have already been approved and opened.

How to use it: Review an application (their KYC and credit checks are shown alongside it), then approve it with a specific credit limit, or decline it. Once open, an account can be frozen here if needed.

Verification

Whoever reviews customer identity (KYC) submissions

What it's for: Every customer's KYC (identity/address verification) submission, organised by store and zone, awaiting an approve/reject decision.

How to use it: Open a submission, check the documents provided, and record the decision. A customer generally cannot be granted credit until their KYC is approved here.

Reviews

Whoever moderates product reviews

What it's for: Product reviews left by customers. Reviews from customers who actually bought the product ("verified buyers") publish automatically; everything else is held here for a manual check before it goes live.

How to use it: Approve genuine reviews or reject spam/inappropriate ones from the moderation queue.

Network

The physical footprint of the business

Stores

Whoever manages the physical store network

What it's for: Every physical VS Mart store: its exact location and its operating hours.

How to use it: Add a new store, edit an existing one's details, or open **Manage store admin** on a store to create the manager login that store uses to sign into its own Store Panel.

Zones

Whoever defines where VS Mart delivers

What it's for: The delivery “serviceability” areas drawn on a map (polygons), which store(s) serve each zone, and the delivery rules that apply within it.

How to use it: Draw or edit a zone boundary on the map, and assign it to the store(s) that will fulfil orders from it. Removing a zone or shrinking its boundary means customers inside the removed area lose the ability to order, so this is a change worth double-checking before saving.

Growth & Support

Marketing, loyalty and customer care

Marketing

Whoever runs promotions and app content

What it's for: Home-screen banners, deals, discount coupons and customer notification campaigns.

How to use it: Create a banner (with its image, text and where it links to), or a coupon code with its rules and expiry. Deleting a banner removes it immediately; deleting a coupon is permanent, so if you might reuse a promotion later, **deactivate** it instead — past redemptions are always kept for accounting either way.

Loyalty

Whoever oversees the points programme

What it's for: Points customers have earned, redeemed, and still hold. Like the Audit Log, this ledger is append-only: a correction is always added as a new adjustment entry, never an edit to history.

How to use it: Use it to check a customer's points balance and history, or to make a manual adjustment (e.g. a goodwill credit) with a clear note explaining why.

Redemptions (*under Loyalty*)

Finance staff tracking the real cost of the points programme

What it's for: Coupons that were actually spent by customers. Redeeming points only mints a voucher — it doesn't cost the business anything until the customer actually uses that voucher, which is what this screen tracks.

How to use it: Use it to see the real, realised cost of the loyalty programme over any period.

Referrals

Whoever runs the refer-a-friend scheme

What it's for: Who referred whom, how many of those referrals converted into real customers, and what the scheme has paid out in rewards.

How to use it: Open a specific referrer to see their individual invite history and conversion rate.

Support

Customer service staff

What it's for: Every customer support ticket, across all customers, in one queue.

How to use it: Reply to a ticket, set its priority, and mark it resolved once handled.

Legal / CMS

Whoever maintains the public-facing policy pages

What it's for: The editable content behind public pages like Privacy Policy, Terms, About and Contact.

How to use it: Pick a page from the list and edit its text directly; create a new page if one doesn't exist yet.

Account Deletions

Whoever handles customer data-deletion requests

What it's for: Customer requests to delete their account and personal data, which by law must be reviewed and actioned rather than ignored.

How to use it: Open a request, confirm what it involves, and action it (or decline with a reason, where applicable) from the filtered queue.

Finance & People

Money, in every form, and staff

Payments

Finance staff reconciling money in and out

What it's for: Every payment, refund and credit repayment across the business, searchable and reconcilable for any date range.

How to use it: Search a specific transaction (e.g. by order or customer), or run a reconciliation for a period to match what the payment gateway reports against what VS Mart's own records show.

Cash Book

Finance staff tracking physical cash collected in the field

What it's for: The full trail of cash collected by field agents, handed over, and counted — so every rupee is traceable from the customer's hand all the way to the bank.

How to use it: Use it to verify an agent's cash handover matches what they collected, and to see which deposits are still awaiting finance sign-off.

Reports

Anyone who needs numbers for a meeting or a decision

What it's for: A library of operational reports — sales, inventory, credit, delivery and more — each exportable as CSV, Excel or PDF.

How to use it: Pick a report, set the date range/filters you need, and export it to share outside the console.

Accounting

Finance/accounts staff

What it's for: Operational financial figures at a glance, backed by a proper double-entry ledger underneath (so every number can be traced to its source, not just estimated).

How to use it: Use the summary view for a quick P&L-style picture; drill into the ledger itself when you need to audit a specific figure.

Agents

Ops management overseeing the delivery/collection fleet

What it's for: Fleet-wide oversight of delivery and collection agents — who's on duty, performance, and zone coverage.

How to use it: Use it to review coverage and performance. Note: individual stores hire and manage their own agents day-to-day; this is the head-office oversight view, not where an agent is hired.

Employees

HR/office admin

What it's for: The staff directory across the whole store network.

How to use it: Look up a staff member here to check their role and store assignment.

System

Configuration and accountability — handle with care

Audit Log

Anyone investigating “who changed this, and when”

What it's for: A complete, append-only record of every privileged action taken in the console by any staff member — who did what, and when.

How to use it: Search or filter by date, user or action type when you need to trace back a change.

Settings

Super Admin only (Admins can view but not save changes)

What it's for: The core business rules the whole platform runs on: currency and GST rate, delivery fee and free-delivery threshold, minimum order value, platform fee, and default credit/late-fee rules.

How to use it: Update a value and click **Save changes**. Because these figures affect every order and every customer immediately, only Super Admins can save changes here — an Admin viewing this page will see the fields but not a working Save button.

Integrations

Super Admin only — not shown in the menu to Admins

What it's for: Third-party credentials the platform depends on: SMS, email, payment gateway and push-notification keys.

How to use it: Enter or rotate a credential here when a provider issues a new key. Secrets are write-only — once saved, the console never displays an existing key back to you, only lets you replace it.

Security Center

Super Admin only — not shown in the menu to Admins

What it's for: Role-based access control and account governance: which staff have which access level.

How to use it: Review the access matrix and staff list here. Some governance features (like enforced two-factor login or session/IP controls) may be labelled as not yet available — that's an honest status flag, not a bug, if you see it.

6. Common tasks, step by step

A handful of quick recipes for the jobs new staff ask about most often.

Approve a new customer's KYC

- 1 Go to **Customers & Credit** → **Verification**.
- 2 Find the customer in the queue (filter by store/zone if needed) and open their submission.
- 3 Check the documents provided, then record your decision — approve or reject.

Review and approve a credit application

- 1 Go to **Customers & Credit** → **Credit**.
- 2 Open the pending application (their KYC status will be shown alongside it).
- 3 Approve with a specific credit limit, or decline with a reason. Approved accounts then appear in the accounts list below the queue, where they can be frozen later if needed.

Create a home-screen promotional banner

- 1 Go to **Growth & Support** → **Marketing**.
- 2 Click to add a new banner, upload its image, set its text and where it should link to, and save.
- 3 To retire it later, deactivate it if you might reuse it, or delete it if not — deleting is immediate.

Add or edit a store

- 1 Go to **Network** → **Stores**.
- 2 Add a new store with its location and operating hours, or edit an existing one.
- 3 To set up that store's own manager login for the separate Store Panel, use **Manage store admin** on its row.

Process a return / refund

- 1 Go to **Commerce** → **Orders** → **Returns & Refunds**.
- 2 Open the request, review the reason (and photos, if supplied).
- 3 Approve to trigger the refund, or reject with a note explaining why.

Check today's business at a glance

- 1 Sign in — the **Dashboard** is the first screen you land on.
- 2 Scan the top KPI cards for revenue, orders, outstanding credit and overdue statements.
- 3 Scroll down for the sales trend, top products, and which delivery agents are currently on duty.

7. Good habits

- **Use filters before scrolling.** Every large list (Orders, Customers, Payments...) supports search and filters at the top — it's almost always faster than scrolling through pages of results.
- **Prefer “deactivate” over “delete”** when you might want a coupon, banner or similar item again — deletion is generally immediate and, for some records, permanent.
- **Read the confirmation text before confirming a delete.** The console always shows what will happen (e.g. “This cannot be undone”, or “customers in this zone will lose serviceability”) — it's there because that specific action is worth a second look.
- **When in doubt about a number, check Reports or Accounting** rather than eyeballing a list — they're built to be the authoritative, exportable source.
- **The Audit Log has your back.** Every privileged action is recorded automatically, so if something looks wrong, the Audit Log can show who did what and when.

8. If something looks wrong

I can't see Integrations / Security in the menu	Those are Super Admin-only areas by design. Ask a Super Admin to make the change, or to upgrade your account if you need standing access.
Settings shows fields but no Save button	You're signed in as an Admin. Only Super Admins can save System Settings; an Admin can still view the current values.
A number on the Dashboard looks stale	Most of the Dashboard is live, but the on-duty agent panel refreshes roughly every 15 seconds — give it a moment, or reload the page.
I was signed out unexpectedly	Sessions expire after a period of inactivity for security. Just sign in again — no work is lost, since changes save as you make them.
A screen shows “coming in a later phase” or is greyed out	That module is planned but not yet built. It's shown so the full roadmap is visible, but there's nothing to click yet.
I genuinely can't find something	Check the Contents page at the front of this guide for which menu group it lives under, or ask whoever manages the console at your organisation.

9. Glossary of terms used in the console

GMV	Gross Merchandise Value — the total rupee value of everything ordered, before refunds or fees are taken out.
KYC	Know Your Customer — the identity/address verification a customer completes before being granted store credit.
SKU	Stock Keeping Unit — the unique code that identifies one specific product/variant in the catalog.

HSN / GST	HSN is the tax classification code for a product; GST is the tax rate applied to it. Both are needed for correct invoicing.
MRP	Maximum Retail Price — the printed/legal ceiling price of a product; the store's actual selling price can be at or below this.
GRN	Goods Receipt Note — the record created when stock ordered from a supplier physically arrives and is checked in.
POD	Proof of Delivery — the photo a delivery agent captures confirming an order was handed over.
Append-only ledger	A record that is only ever added to, never edited or deleted — corrections are new entries, so the history stays honest and auditable.
Zone	A mapped delivery area; a customer must be inside a serviceable zone to place an order, and each zone is served by one or more assigned stores.
Serviceability	Whether VS Mart currently delivers to a given address — determined by whether that address falls inside an active zone.

10. Getting more help

This guide covers what the console does and how to use it. For anything role- or permission-specific (getting an account created, being upgraded to Super Admin, or a change that needs sign-off), speak to whoever administers the VS Mart platform at your organisation.

This guide describes the console as it exists at the time of writing. Screens and menu items are occasionally added as the platform grows — if something here no longer matches what you see on screen, the on-screen labels and descriptions are always the current source of truth.
